

spheroidal\_lib

0.1.0

Generated by Doxygen 1.9.1

# Chapter 1

## <tt>spheroidal</tt>

### 1.1 Description

`spheroidal` is a library for constructing and manipulating spheroidal harmonics, evaluating boundary integral operators, and other operations necessary for solving boundary integral equations on spheroids. Additionally, this repository contains example files to demonstrate usage and test files to demonstrate correctness.

Additionally, this repository contains Yet Another Wrapper for GSL, or `yawg`. This library contains a lightweight interface for the GNU Scientific Library, or GSL. Its intentions are to simplify usage of these functions, such as with a `gsl::vector` class that automatically handles memory allocation and pointer management.

The full documentation is built with `doxygen`, and can be constructed by performing the `make docs` command.

### 1.2 Getting Started

Both the `spheroidal` and `yawg` libraries are built using CMake. To build from the command line, run

```
mkdir build
cd build
cmake ..
make (<specific target>)
```

An extensive library of testing functions and assertions is contained in the `tests` subfolder. These tests can also be built and executed using CMake.

#### 1.2.1 Dependencies

Requires the following prerequisites, along with the version used during testing:

- C++11
- CMake v3.22.1
- GNU Scientific Library v2.7.1
- Doxygen v1.9.1 (optional)
- Catch2 v3.0.1

## 1.3 Authors

[Jacob Spainhour](@jcs15c)

[Leo Crowder](@lcrowder)

## 1.4 Version History

- 0.1
  - Initial Release

## 1.5 Acknowledgments

We would like to acknowledge the existence of other GSL C++ wrappers, and hope that ours is comparable in utility.

The following are existing C++ gsl wrapper classes we have found.

- GSLwrap: <https://gslwrap.sourceforge.net/>
- ccgsl: <https://ccgsl.sourceforge.net/>
- GSL-lib: <https://github.com/johanjoensson/GSL-lib>
- ROOT: <https://root.cern/root/html606/index.html>

## Chapter 2

# Namespace Index

### 2.1 Namespace List

Here is a list of all namespaces with brief descriptions:

<a href="#">gsl</a> . . . . .	??
<a href="#">gsl::complex_literals</a> . . . . .	??

## Chapter 3

# Hierarchical Index

### 3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

gsl::cmatrix . . . . .	??
gsl::cmatrix_view . . . . .	??
gsl::complex_ref . . . . .	??
gsl::cvector . . . . .	??
gsl::cvector_view . . . . .	??
gsl::ccolumn_view . . . . .	??
gsl::crow_view . . . . .	??
gsl_complex	
gsl::complex . . . . .	??
gsl::matrix . . . . .	??
gsl::matrix_view . . . . .	??
gsl::vector . . . . .	??
gsl::vector_view . . . . .	??
gsl::column_view . . . . .	??
gsl::row_view . . . . .	??

## Chapter 4

# Class Index

### 4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">gsl::ccolumn_view</a>		
	A subclass of <a href="#">cvector_view</a> for non-stride-1 cvector	??
<a href="#">gsl::cmatrix</a>		??
<a href="#">gsl::cmatrix_view</a>		
	A wrapper class for <a href="#">gsl_matrix_complex_view</a>	??
<a href="#">gsl::column_view</a>		
	A subclass of <a href="#">vector_view</a> for non-stride-1 vectors	??
<a href="#">gsl::complex</a>		
	Wrapper class for <a href="#">gsl_complex</a> structs	??
<a href="#">gsl::complex_ref</a>		
	Stores a reference to a <a href="#">gsl::complex</a> object	??
<a href="#">gsl::crow_view</a>		
	A subclass of <a href="#">cvector_view</a> for stride-1 vectors	??
<a href="#">gsl::cvector</a>		
	A wrapper class for <a href="#">gsl_vector_complex</a>	??
<a href="#">gsl::cvector_view</a>		
	A wrapper class for <a href="#">gsl_vector_complex_view</a>	??
<a href="#">gsl::matrix</a>		
	A wrapper class for <a href="#">gsl_matrix</a>	??
<a href="#">gsl::matrix_view</a>		
	A wrapper class for <a href="#">gsl_matrix_view</a>	??
<a href="#">gsl::row_view</a>		
	A subclass of <a href="#">vector_view</a> for stride-1 vectors	??
<a href="#">gsl::vector</a>		
	A wrapper class for <a href="#">gsl_vector</a>	??
<a href="#">gsl::vector_view</a>		
	A wrapper class for <a href="#">gsl_vector_view</a>	??

## Chapter 5

*Move version of arrayfun.*

- `template<typename Lambda >`  
`gsl::cmatrix arrayfun` (Lambda &&func, const `gsl::cmatrix` &x)  
*Copy version of arrayfun for complex matrices.*
- `template<typename Lambda >`  
`gsl::cmatrix arrayfun` (Lambda &&func, `gsl::cmatrix` &&x)  
*Move version of arrayfun for complex matrices.*

## 6.1.1 Function Documentation

### 6.1.1.1 `arange()`

```
gsl::vector gsl::arange (
    double a,
    double b,
    double step = 1.0 )
```

### 6.1.1.2 `arrayfun()` [1/8]

```
template<typename Lambda >
gsl::cmatrix gsl::arrayfun (
    Lambda && func,
    const gsl::cmatrix & x )
```

Copy version of arrayfun for complex matrices.

### 6.1.1.3 `arrayfun()` [2/8]

```
template<typename Lambda >
gsl::cvector gsl::arrayfun (
    Lambda && func,
    const gsl::cvector & x )
```

Copy version of arrayfun for complex vectors.

### 6.1.1.4 `arrayfun()` [3/8]

```
template<typename Lambda >
gsl::matrix gsl::arrayfun (
    Lambda && func,
    const gsl::matrix & x )
```

Apply lambda function to each element of a `gsl::matrix`, akin to MATLAB `arrayfun`.

**Parameters**

<i>func</i>	Lambda function to apply to each element
<i>x</i>	Input matrix

**Note**

This function is not optimized for speed, but rather for convenience, as there is overhead in using templated Lambda functions. If speed is necessary, add the function to `gsl_utils` specifically.

**Returns**

Matrix of same size as `x` with `func` applied to each element

**6.1.1.5 arrayfun() [4/8]**

```
template<typename Lambda >
gsl::vector gsl::arrayfun (
    Lambda && func,
    const gsl::vector & x )
```

Apply lambda function to each element of a `gsl::vector`, akin to MATLAB `arrayfun`.

**Parameters**

<i>func</i>	Lambda function to apply to each element
<i>x</i>	Input matrix

**Note**

This function is not optimized for speed, but rather for convenience, as there is overhead in using templated Lambda functions. If speed is necessary, add the function to `gsl_utils` specifically.

**Returns**

Matrix of same size as `x` with `func` applied to each element

**6.1.1.6 arrayfun() [5/8]**

```
template<typename Lambda >
gsl::cmatrix gsl::arrayfun (
    Lambda && func,
    gsl::cmatrix && x )
```

Move version of `arrayfun` for complex matrices.

#### 6.1.1.7 arrayfun() [6/8]

```
template<typename Lambda >
gsl::cvector gsl::arrayfun (
    Lambda && func,
    gsl::cvector && x )
```

Move version of arrayfun for complex vectors.

#### 6.1.1.8 arrayfun() [7/8]

```
template<typename Lambda >
gsl::matrix gsl::arrayfun (
    Lambda && func,
    gsl::matrix && x )
```

Move version of arrayfun.

#### 6.1.1.9 arrayfun() [8/8]

```
template<typename Lambda >
gsl::vector gsl::arrayfun (
    Lambda && func,
    gsl::vector && x )
```

Move version of arrayfun for vectors.

#### 6.1.1.10 eye()

```
gsl::matrix gsl::eye (
    size_t n )
```

Return the nxn identity matrix.

#### 6.1.1.11 fft() [1/4]

```
gsl::cmatrix gsl::fft (
    const gsl::cmatrix & x,
    int dim = 1 )
```

Compute 1D fft of each column/row of a gsl::(c)matrix.

**6.1.1.12 fft() [2/4]**

```
gsl::cvector gsl::fft (
    const gsl::cvector & x )
```

Compute fft of a `gsl::(c)vector`.

**6.1.1.13 fft() [3/4]**

```
gsl::cmatrix gsl::fft (
    gsl::cmatrix && x,
    int dim = 1 )
```

Compute in-place 1D fft of each column/row of a `gsl::(c)matrix`.

**6.1.1.14 fft() [4/4]**

```
gsl::cvector gsl::fft (
    gsl::cvector && x )
```

Compute in-place fft of a `gsl::(c)vector`.

**6.1.1.15 ifft() [1/4]**

```
gsl::cmatrix gsl::ifft (
    const gsl::cmatrix & x,
    int dim = 1 )
```

Compute 1D inverse fft of each column/row of a `gsl::(c)matrix`.

**6.1.1.16 ifft() [2/4]**

```
gsl::cvector gsl::ifft (
    const gsl::cvector & x )
```

Compute inverse fft of a `gsl::(c)vector`.

**6.1.1.17** `ifft()` [3/4]

```
gsl::cmatrix gsl::ifft (
    gsl::cmatrix && x,
    int dim = 1 )
```

Compute in-place 1D inverse fft of each column/row of a `gsl::(c)matrix`.

**6.1.1.18** `ifft()` [4/4]

```
gsl::cvector gsl::ifft (
    gsl::cvector && x )
```

Compute in-place inverse fft of a `gsl::(c)vector`.

**6.1.1.19** `leggauss()` [1/2]

```
vector gsl::leggauss (
    size_t n,
    double a = -1.0,
    double b = 1.0 )
```

Get a vector Gauss-Legendre quadrature nodes.

**6.1.1.20** `leggauss()` [2/2]

```
void gsl::leggauss (
    size_t n,
    gsl::vector & x,
    gsl::vector & w,
    double a = -1.0,
    double b = 1.0 )
```

Store Gauss-Legendre quadrature nodes and weights.

**6.1.1.21** `linspace()` [1/2]

```
gsl::vector gsl::linspace (
    double a,
    double b,
    size_t N = 100 )
```

Get a `gsl::vector` of evenly spaced points on the interval [a, b] (inclusive)

### 6.1.1.22 linspace() [2/2]

```
gsl::cvector gsl::linspace (
    gsl::complex a,
    gsl::complex b,
    size_t n )
```

Complex version of linspace.

### 6.1.1.23 meshgrid() [1/2]

```
void gsl::meshgrid (
    const gsl::cvector & x,
    const gsl::cvector & y,
    gsl::cmatrix & X,
    gsl::cmatrix & Y )
```

Complex version of [gsl::meshgrid](#)

### 6.1.1.24 meshgrid() [2/2]

```
void gsl::meshgrid (
    const gsl::vector & x,
    const gsl::vector & y,
    gsl::matrix & X,
    gsl::matrix & Y )
```

Store 2D grid coordinates based on 1D input gsl::vectors.

## 6.2 gsl::complex\_literals Namespace Reference

### Functions

- [complex operator""\\_i](#) (long double y)  
*User defined literal overload for complex numbers.*

### 6.2.1 Function Documentation

#### 6.2.1.1 operator""\_i()

```
complex gsl::complex_literals::operator""_i (
    long double y ) [inline]
```

User defined literal overload for complex numbers.

## Chapter 7

# Class Documentation

### 7.1 gsl::ccolumn\_view Class Reference

A subclass of [cvector\\_view](#) for non-stride-1 cvecs.

```
#include <cvector.h>
```

Inheritance diagram for `gsl::ccolumn_view`:

#### Public Member Functions

- [ccolumn\\_view](#) (`gsl_vector_complex_view` [gvec\\_view](#))  
*Construct [ccolumn\\_view](#) from existing `cvector` view.*
- [ccolumn\\_view](#) (`const cvector &``v`)  
*Construct [ccolumn\\_view](#) from `cvector`.*

#### Additional Inherited Members

##### 7.1.1 Detailed Description

A subclass of [cvector\\_view](#) for non-stride-1 cvecs.

##### 7.1.2 Constructor & Destructor Documentation

### 7.1.2.1 ccolumn\_view() [1/2]

```
gsl::ccolumn_view::ccolumn_view (
    gsl_vector_complex_view gvec_view ) [inline]
```

Construct [ccolumn\\_view](#) from existing cvector view.

### 7.1.2.2 ccolumn\_view() [2/2]

```
gsl::ccolumn_view::ccolumn_view (
    const cvector & v ) [inline]
```

Construct [ccolumn\\_view](#) from cvector.

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/cvector.h](#)

## 7.2 gsl::cmatrix Class Reference

```
#include <cmatrix.h>
```

### Public Member Functions

## 7.2.1 Constructor & Destructor Documentation

### 7.2.1.1 `cmatrix()` [1/8]

```
gsl::cmatrix::cmatrix ( )
```

Construct empty matrix.

### 7.2.1.2 `cmatrix()` [2/8]

```
gsl::cmatrix::cmatrix (
    size_t n,
    size_t m )
```

Construct zero matrix of size  $n \times m$ .

### 7.2.1.3 `cmatrix()` [3/8]

```
gsl::cmatrix::cmatrix (
    const gsl_matrix_complex * gmat_other )
```

Construct new [gsl::matrix](#) from `gsl_matrix`.

### 7.2.1.4 `cmatrix()` [4/8]

```
gsl::cmatrix::cmatrix (
    const cvector & v )
```

Construct new  $n \times 1$  [gsl::cmatrix](#) from a [gsl::cvector](#).

### 7.2.1.5 `cmatrix()` [5/8]

```
gsl::cmatrix::cmatrix (
    const cmatrix & M,
    size_t n,
    size_t m )
```

Copy constructor creating  $n \times m$  complex matrix.

### 7.2.1.6 `cmatrix()` [6/8]

```
gsl::cmatrix::cmatrix (
    const cmatrix & M )
```

### 7.2.1.7 `cmatrix()` [7/8]

```
gsl::cmatrix::cmatrix (
    cmatrix && M )
```

### 7.2.1.8 `cmatrix()` [8/8]

```
gsl::cmatrix::cmatrix (
    const matrix & M )
```

Construct new `gsl::cmatrix` from `gsl::matrix`.

### 7.2.1.9 `~cmatrix()`

```
gsl::cmatrix::~~cmatrix ( )
```

## 7.2.2 Member Function Documentation

### 7.2.2.1 `calloc()`

```
void gsl::cmatrix::calloc (
    size_t n,
    size_t m ) [protected]
```

Private function to (continuously) allocate memory.

### 7.2.2.2 `clear()`

```
void gsl::cmatrix::clear ( )
```

Clear the `gsl::cmatrix`, free underlying memory.

### 7.2.2.3 `column()`

```
ccolumn_view gsl::cmatrix::column (
    size_t j )
```

Return a view to a column of the complex matrix.

#### 7.2.2.4 free()

```
void gsl::cmatrix::free ( ) [protected]
```

Private function to free allocated memory.

#### 7.2.2.5 get()

```
complex gsl::cmatrix::get (
    size_t i,
    size_t j ) const
```

Return a const reference to the element at position (i,j)

#### 7.2.2.6 get\_gsl\_ptr()

```
gsl_matrix_complex* gsl::cmatrix::get_gsl_ptr ( ) const [inline]
```

Access the pointer to the underlying gsl\_matrix\_complex.

#### 7.2.2.7 ncols()

```
size_t gsl::cmatrix::ncols ( ) const
```

#### 7.2.2.8 nrows()

```
size_t gsl::cmatrix::nrows ( ) const
```

#### 7.2.2.9 operator()( ) [1/2]

```
complex_ref gsl::cmatrix::operator() (
    size_t i,
    size_t j )
```

Return a reference to the element at position (i,j)

### 7.2.2.10 operator>() [2/2]

```
const complex_ref gsl::cmatrix::operator() (
    size_t i,
    size_t j ) const
```

### 7.2.2.11 operator=() [1/2]

```
cmatrix& gsl::cmatrix::operator= (
    cmatrix && gvec_other )
```

### 7.2.2.12 operator=() [2/2]

```
cmatrix& gsl::cmatrix::operator= (
    const cmatrix & gvec_other )
```

### 7.2.2.13 print()

```
void gsl::cmatrix::print (
    FILE * out = stdout ) const
```

Pretty-print the complex matrix to file stream.

### 7.2.2.14 reshape()

```
cmatrix gsl::cmatrix::reshape (
    size_t n,
    size_t m ) const
```

Return a new  $n \times m$  [gsl::cmatrix](#) with same elements.

### 7.2.2.15 resize()

```
void gsl::cmatrix::resize (
    size_t n,
    size_t m )
```

Resize the [gsl::cmatrix](#), setting elements to zero.

#### 7.2.2.16 row()

```
crow_view gsl::cmatrix::row (
    size_t i )
```

Return a view to a row of the complex matrix.

#### 7.2.2.17 set()

```
void gsl::cmatrix::set (
    size_t i,
    size_t j,
    complex z )
```

#### 7.2.2.18 size()

```
size_t gsl::cmatrix::size ( ) const
```

#### 7.2.2.19 submatrix()

```
cmatrix_view gsl::cmatrix::submatrix (
    size_t i,
    size_t j,
    size_t n,
    size_t m )
```

Return a view to a submatrix of the complex matrix.

### 7.2.3 Friends And Related Function Documentation

#### 7.2.3.1 ccolumn\_view

```
friend class ccolumn_view [friend]
```

#### 7.2.3.2 cmatrix\_view

```
friend class cmatrix_view [friend]
```

### 7.2.3.3 crow\_view

```
friend class crow_view [friend]
```

### 7.2.3.4 matrix

```
friend class matrix [friend]
```

### 7.2.3.5 operator\*

```
cmatrix operator* (
    const cmatrix & A,
    const cmatrix & B ) [friend]
```

## 7.2.4 Member Data Documentation

### 7.2.4.1 gmat

```
gsl_matrix_complex* gsl::cmatrix::gmat [protected]
```

The documentation for this class was generated from the following file:

- /home/jspainhour/spheroidal\_cpp/include/yawg/[cmatrix.h](#)

## 7.3 gsl::cmatrix\_view Class Reference

A wrapper class for gsl\_matrix\_complex\_view.

```
#include <cmatrix.h>
```

### Public Member Functions

- [operator cmatrix](#) () const  
*"Dereferences" a [matrix\\_view](#) into independent [gsl::cmatrix](#) object*

*Return a constant pointer to the underlying [gsl\\_matrix\\_complex](#).*

## Protected Attributes

- `gsl_matrix_complex_view` [gmat\\_view](#)

### 7.3.1 Detailed Description

A wrapper class for `gsl_matrix_complex_view`.

Stores a `gsl_matrix_complex_view` and uses it to access original member data.

### 7.3.2 Constructor & Destructor Documentation

#### 7.3.2.1 `cmatrix_view()` [1/2]

```
gsl::cmatrix_view::cmatrix_view (  
    gsl_matrix_complex_view gmat_view )    [inline]
```

Construct a view of a [gsl::cmatrix](#) through another [cmatrix\\_view](#).

#### 7.3.2.2 `cmatrix_view()` [2/2]

```
gsl::cmatrix_view::cmatrix_view (  
    const cmatrix & m )    [inline]
```

Construct a view of the given [gsl::cmatrix](#).

### 7.3.3 Member Function Documentation

#### 7.3.3.1 `get_gsl_ptr()`

```
const gsl_matrix_complex* gsl::cmatrix_view::get_gsl_ptr ( ) const    [inline]
```

Return a constant pointer to the underlying `gsl_matrix_complex`.

### 7.3.3.2 operator cmatrix()

```
gsl::cmatrix_view::operator cmatrix ( ) const [inline]
```

"Dereferences" a [matrix\\_view](#) into independent [gsl::cmatrix](#) object

### 7.3.3.3 operator=() [1/2]

```
cmatrix_view& gsl::cmatrix_view::operator= (
    cmatrix_view v )
```

Assignment to a complex matrix view from another complex matrix view.

### 7.3.3.4 operator=() [2/2]

```
cmatrix_view& gsl::cmatrix_view::operator= (
    const cmatrix & v )
```

Assignment to a complex matrix view from a complex matrix.

### 7.3.3.5 print()

```
void gsl::cmatrix_view::print (
    FILE * out = stdout ) const
```

Pretty-print the viewed complex matrix to file stream.

## 7.3.4 Member Data Documentation

### 7.3.4.1 gmat\_view

```
gsl_matrix_complex_view gsl::cmatrix_view::gmat_view [protected]
```

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/cmatrix.h](#)

## 7.4 gsl::column\_view Class Reference

A subclass of [vector\\_view](#) for non-stride-1 vectors.

```
#include <vector.h>
```

Inheritance diagram for `gsl::column_view`:

### Public Member Functions

- [column\\_view](#) ([gsl\\_vector\\_view](#) [gvec\\_view](#))  
Construct [column\\_view](#) from existing vector view.
- [column\\_view](#) (const [vector](#) &v)  
Construct [column\\_view](#) from vector.

### Additional Inherited Members

#### 7.4.1 Detailed Description

A subclass of [vector\\_view](#) for non-stride-1 vectors.

#### 7.4.2 Constructor & Destructor Documentation

##### 7.4.2.1 column\_view() [1/2]

```
gsl::column_view::column_view (
    gsl_vector_view gvec_view ) [inline]
```

Construct [column\\_view](#) from existing vector view.

##### 7.4.2.2 column\_view() [2/2]

```
gsl::column_view::column_view (
    const vector & v ) [inline]
```

Construct [column\\_view](#) from vector.

The documentation for this class was generated from the following file:

- `/home/jspainhour/spheroidal_cpp/include/yawg/vector.h`

## 7.5 gsl::complex Class Reference

Wrapper class for gsl\_complex structs.

```
#include <complex.h>
```

Inheritance diagram for gsl::complex:

### Public Member Functions

*Assigns values of one [complex\\_ref](#) object to another.*
- double [real](#) () const
- double [imag](#) () const

### Protected Member Functions

- [complex\\_ref](#) ()

### Protected Attributes

- double \* [dat](#)

## 7.6.1 Detailed Description

Stores a reference to a [gsl::complex](#) object.

This class is necessary to communicate between `gsl_complex` and [gsl::complex](#) so that overloads of `()` work [gsl::cvector](#) and [gsl::cmatrix](#).

Implementation heavily inspired by `ccgsl` ( <https://ccgsl.sourceforge.net/> )

## 7.6.2 Constructor & Destructor Documentation

### 7.6.2.1 `complex_ref()` [1/4]

```
gsl::complex_ref::complex_ref ( ) [inline], [protected]
```

### 7.6.2.2 `complex_ref()` [2/4]

```
gsl::complex_ref::complex_ref (
    complex_ref & z ) [inline]
```

Constructs a reference to another `complex_ref` object.

### 7.6.2.3 `complex_ref()` [3/4]

```
gsl::complex_ref::complex_ref (
    gsl_complex * z ) [inline]
```

Constructs a reference to a `gsl_complex` struct.

### 7.6.2.4 `complex_ref()` [4/4]

```
gsl::complex_ref::complex_ref (
    complex & z ) [inline]
```

Constructs a reference to a [gsl::complex](#) object.

## 7.6.3 Member Function Documentation

#### 7.6.3.1 imag()

```
double gsl::complex_ref::imag ( ) const [inline]
```

#### 7.6.3.2 operator complex()

```
gsl::complex_ref::operator complex ( ) const [inline]
```

"Dereferences" a `complex_ref` into independent `gsl::complex` object

#### 7.6.3.3 operator=() [1/2]

```
complex_ref& gsl::complex_ref::operator= (
    complex z ) [inline]
```

Assigns values of `gsl::complex` object to the reference.

#### 7.6.3.4 operator=() [2/2]

```
complex_ref& gsl::complex_ref::operator= (
    complex_ref z ) [inline]
```

Assigns values of one `complex_ref` object to another.

#### Note

This is an alternative to the default assignment operator, which does not work for unknown reasons.

#### 7.6.3.5 real()

```
double gsl::complex_ref::real ( ) const [inline]
```

### 7.6.4 Member Data Documentation

#### 7.6.4.1 dat

```
double* gsl::complex_ref::dat [protected]
```

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/complex.h](/home/jspainhour/spheroidal_cpp/include/yawg/complex.h)

## 7.7 gsl::crow\_view Class Reference

A subclass of [cvector\\_view](#) for stride-1 vectors.

```
#include <cvector.h>
```

Inheritance diagram for `gsl::crow_view`:

### Public Member Functions

- [crow\\_view](#) ([gsl\\_vector\\_complex\\_view](#) [gvec\\_view](#))  
*Construct [crow\\_view](#) from existing [cvector](#) view, checking that stride is 1.*
- [crow\\_view](#) (const [cvector](#) &*v*)  
*Construct [crow\\_view](#) from [cvector](#), checking that stride is 1.*
- [cmatrix\\_view](#) [reshape](#) (size\_t *n*, size\_t *m*)  
*Return a [cmatrix](#) view out of the elements of the row.*

### Additional Inherited Members

#### 7.7.1 Detailed Description

A subclass of [cvector\\_view](#) for stride-1 vectors.

#### 7.7.2 Constructor & Destructor Documentation

##### 7.7.2.1 crow\_view() [1/2]

```
gsl::crow_view::crow_view (  
    gsl_vector_complex_view gvec_view ) [inline]
```

Construct [crow\\_view](#) from existing [cvector](#) view, checking that stride is 1.

### 7.7.2.2 `crow_view()` [2/2]

```
gsl::crow_view::crow_view (
    const cvector & v ) [inline]
```

Construct [crow\\_view](#) from [cvector](#), checking that stride is 1.

## 7.7.3 Member Function Documentation

### 7.7.3.1 `reshape()`

```
cmatrix\_view gsl::crow_view::reshape (
    size_t n,
    size_t m )
```

Return a [cmatrix](#) view out of the elements of the row.

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/cvector.h](#)

## 7.8 `gsl::cvector` Class Reference

A wrapper class for `gsl_vector_complex`.

### 7.8.1 Detailed Description

A wrapper class for `gsl_vector_complex`.

Stores and operates on a pointer to a `gsl_vector_complex`.

### 7.8.2 Constructor & Destructor Documentation

#### 7.8.2.1 `cvector()` [1/6]

```
gsl::cvector::cvector ( )
```

Construct empty vector.

#### 7.8.2.2 `cvector()` [2/6]

```
gsl::cvector::cvector (
    size_t n ) [explicit]
```

Construct zero vector of size `n`.

#### 7.8.2.3 `cvector()` [3/6]

```
gsl::cvector::cvector (
    const gsl_vector_complex * gvec_other )
```

Construct new [gsl::cvector](#) from `gsl_vector_complex`.

#### 7.8.2.4 `cvector()` [4/6]

```
gsl::cvector::cvector (
    const cvector & gvec_other )
```

#### 7.8.2.5 `cvector()` [5/6]

```
gsl::cvector::cvector (
    cvector && gvec_other )
```

### 7.8.2.6 `cvector()` [6/6]

```
gsl::cvector::cvector (
    const vector & vec )
```

Construct new [gsl::cvector](#) from [gsl::vector](#).

### 7.8.2.7 `~cvector()`

```
gsl::cvector::~~cvector ( )
```

## 7.8.3 Member Function Documentation

### 7.8.3.1 `calloc()`

```
void gsl::cvector::calloc (
    size_t n ) [protected]
```

Private function to (continuously) allocate memory.

### 7.8.3.2 `clear()`

```
void gsl::cvector::clear ( )
```

Clear the [gsl::cvector](#), free underlying memory.

### 7.8.3.3 `free()`

```
void gsl::cvector::free ( ) [protected]
```

Private function to free allocated memory.

### 7.8.3.4 `get()`

```
complex gsl::cvector::get (
    size_t i ) const
```

#### 7.8.3.5 get\_gsl\_ptr()

```
gsl_vector_complex* gsl::cvector::get_gsl_ptr ( ) const [inline]
```

Access the pointer to the underlying `gsl_vector_complex`.

#### 7.8.3.6 norm()

```
double gsl::cvector::norm ( ) const [inline]
```

Return the 2-norm of the vector.

#### 7.8.3.7 operator()( ) [1/2]

```
complex_ref gsl::cvector::operator() (
    size_t i )
```

Return a reference to the element at position (i,j)

#### 7.8.3.8 operator()( ) [2/2]

```
const complex_ref gsl::cvector::operator() (
    size_t i ) const
```

#### 7.8.3.9 operator+=( )

```
cvector& gsl::cvector::operator+= (
    const cvector & gvec_other )
```

#### 7.8.3.10 operator-=( )

```
cvector& gsl::cvector::operator-= (
    const cvector & gvec_other )
```

#### 7.8.3.11 operator=() [1/2]

```
cvector& gsl::cvector::operator= (
    const cvector & gvec_other )
```

#### 7.8.3.12 operator=() [2/2]

```
cvector& gsl::cvector::operator= (
    cvector && gvec_other )
```

#### 7.8.3.13 print()

```
void gsl::cvector::print (
    FILE * out = stdout ) const
```

Pretty-print the complex vector to file stream.

#### 7.8.3.14 resize()

```
void gsl::cvector::resize (
    size_t n )
```

Resize the [gsl::cvector](#), setting elements to zero.

#### 7.8.3.15 set()

```
void gsl::cvector::set (
    size_t i,
    complex z )
```

#### 7.8.3.16 size()

```
size_t gsl::cvector::size ( ) const
```

#### 7.8.3.17 subvector()

```
cvector_view gsl::cvector::subvector (
    size_t offset,
    size_t size )
```

Return a view to a subvector of the vector.

#### 7.8.3.18 view()

```
cvector_view gsl::cvector::view ( )
```

Return a view to the entire vector.

### 7.8.4 Friends And Related Function Documentation

#### 7.8.4.1 ccolumn\_view

```
friend class ccolumn_view [friend]
```

#### 7.8.4.2 cmatrix

```

## Protected Attributes

- `gsl_vector_complex_view` [gvec\\_view](#)

### 7.9.1 Detailed Description

A wrapper class for `gsl_vector_complex_view`.

Stores a `gsl_vector_complex_view` and uses it to access original member data.

### 7.9.2 Constructor & Destructor Documentation

#### 7.9.2.1 `cvector_view()` [1/2]

```
gsl::cvector_view::cvector_view (  
    gsl_vector_complex_view gvec_view )    [inline]
```

Construct a view of a [gsl::cvector](#) through another [cvector\\_view](#).

#### 7.9.2.2 `cvector_view()` [2/2]

```
gsl::cvector_view::cvector_view (  
    const cvector & v )    [inline]
```

Construct a view of the given [gsl::cvector](#).

### 7.9.3 Member Function Documentation

#### 7.9.3.1 `get_gsl_ptr()`

```
const gsl_vector_complex* gsl::cvector_view::get_gsl_ptr ( ) const    [inline]
```

Return a constant pointer to the underlying `gsl_vector_complex`.

### 7.9.3.2 operator cvector()

```
gsl::cvector_view::operator cvector ( ) const [inline]
```

"Dereferences" a [cvector\\_view](#) into independent [gsl::cvector](#) object

### 7.9.3.3 operator=() [1/2]

```
cvector_view& gsl::cvector_view::operator= (
    const cvector & v )
```

Assignment to a cvector view from a cvector.

### 7.9.3.4 operator=() [2/2]

```
cvector_view& gsl::cvector_view::operator= (
    cvector_view v )
```

Assignment to a cvector view from another cvector view.

### 7.9.3.5 print()

```
void gsl::cvector_view::print (
    FILE * out = stdout ) const
```

Pretty-print the viewed vector to file stream.

## 7.9.4 Member Data Documentation

### 7.9.4.1 gvec\_view

```
gsl_vector_complex_view gsl::cvector_view::gvec_view [protected]
```

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/cvector.h](#)

## 7.10 gsl::matrix Class Reference

A wrapper class for gsl\_matrix.

```
#include <matrix.h>
```

### Public Member Functions

- [matrix](#) ()

### 7.10.1 Detailed Description

A wrapper class for `gsl_matrix`.

Stores and operates on a pointer to a `gsl_matrix`.

### 7.10.2 Constructor & Destructor Documentation

#### 7.10.2.1 `matrix()` [1/7]

```
gsl::matrix::matrix ( )
```

Construct empty matrix.

#### 7.10.2.2 `matrix()` [2/7]

```
gsl::matrix::matrix (
    size_t n,
    size_t m )
```

Construct zero matrix of size n x m.

### 7.10.2.3 matrix() [3/7]

```
gsl::matrix::matrix (
    const gsl_matrix * gsl_mat )
```

Construct new [gsl::matrix](#) from `gsl_matrix`.

### 7.10.2.4 matrix() [4/7]

```
gsl::matrix::matrix (
    const vector & v )
```

Construct new  $n \times 1$  [gsl::matrix](#) from [gsl::vector](#).

### 7.10.2.5 matrix() [5/7]

```
gsl::matrix::matrix (
    const matrix & M,
    size_t n,
    size_t m )
```

Copy constructor creating  $n \times m$  matrix.

### 7.10.2.6 matrix() [6/7]

```
gsl::matrix::matrix (
    const matrix & M )
```

### 7.10.2.7 matrix() [7/7]

```
gsl::matrix::matrix (
    matrix && M )
```

### 7.10.2.8 ~matrix()

```
gsl::matrix::~~matrix ( )
```

### 7.10.3 Member Function Documentation

#### 7.10.3.1 calloc()

```
void gsl::matrix::calloc (
    size_t n,
    size_t m ) [protected]
```

Private function to (continuously) allocate memory.

#### 7.10.3.2 clear()

```
void gsl::matrix::clear ( )
```

Clear the [gsl::matrix](#), free underlying memory.

#### 7.10.3.3 column()

```
column_view gsl::matrix::column (
    size_t j )
```

Return a view to a column of the matrix.

#### 7.10.3.4 free()

```
void gsl::matrix::free ( ) [protected]
```

Private function to free allocated memory.

#### 7.10.3.5 get()

```
double gsl::matrix::get (
    size_t i,
    size_t j ) const
```

#### 7.10.3.6 get\_gsl\_ptr()

```
gsl_matrix* gsl::matrix::get_gsl_ptr ( ) const [inline]
```

Access the pointer to the underlying `gsl_matrix`.

#### 7.10.3.7 load\_csv()

```
void gsl::matrix::load_csv (
    FILE * in = stdin )
```

Load the matrix from a file stream in CSV format.

#### 7.10.3.8 ncols()

```
size_t gsl::matrix::ncols ( ) const
```

#### 7.10.3.9 nrows()

```
size_t gsl::matrix::nrows ( ) const
```

#### 7.10.3.10 operator>() [1/2]

```
double& gsl::matrix::operator() (
    size_t i,
    size_t j )
```

#### 7.10.3.11 operator>() [2/2]

```
double gsl::matrix::operator() (
    size_t i,
    size_t j ) const
```

### 7.10.3.12 operator=() [1/2]

```
matrix& gsl::matrix::operator= (
    const matrix & M )
```

### 7.10.3.13 operator=() [2/2]

```
matrix& gsl::matrix::operator= (
    matrix && M )
```

### 7.10.3.14 print()

```
void gsl::matrix::print (
    FILE * out = stdout ) const
```

Pretty-print the matrix to file stream.

### 7.10.3.15 print\_csv()

```
void gsl::matrix::print_csv (
    FILE * out = stdout ) const
```

Print the matrix to file stream in CSV format.

### 7.10.3.16 reshape()

```
matrix gsl::matrix::reshape (
    size_t n,
    size_t m ) const
```

Return a new  $n \times m$  [gsl::matrix](#) with same elements.

### 7.10.3.17 resize()

```
void gsl::matrix::resize (
    size_t n,
    size_t m )
```

Resize the [gsl::matrix](#), setting elements to zero.

#### 7.10.3.18 row()

```
row_view gsl::matrix::row (
    size_t i )
```

Return a view to a row of the matrix.

#### 7.10.3.19 set()

```
void gsl::matrix::set (
    size_t i,
    size_t j,
    double val )
```

#### 7.10.3.20 size()

```
size_t gsl::matrix::size ( ) const
```

#### 7.10.3.21 submatrix()

```
matrix_view gsl::matrix::submatrix (
    size_t i,
    size_t j,
    size_t n,
    size_t m )
```

Return a view to a submatrix of the matrix.

### 7.10.4 Friends And Related Function Documentation

#### 7.10.4.1 cmatrix

```
friend class cmatrix [friend]
```

#### 7.10.4.2 column\_view

```
friend class column_view [friend]
```

### 7.10.4.3 matrix\_view

```
friend class matrix_view [friend]
```

### 7.10.4.4 operator\*

```
matrix operator* (
    const matrix & A,
    const matrix & B ) [friend]
```

### 7.10.4.5 row\_view

```
friend class row_view [friend]
```

## 7.10.5 Member Data Documentation

### 7.10.5.1 gmat

```
gsl_matrix* gsl::matrix::gmat [protected]
```

The documentation for this class was generated from the following file:

- /home/jspainhour/spheroidal\_cpp/include/yawg/matrix.h

## 7.11 gsl::matrix\_view Class Reference

A wrapper class for gsl\_matrix\_view.

```
#include <matrix.h>
```

### Public Member Functions

- [operator matrix](#) () const  
*"Dereferences" a [matrix\\_view](#) into independent [gsl::matrix](#) object*

## Protected Attributes

- `gsl_matrix_view` [gmat\\_view](#)

### 7.11.1 Detailed Description

A wrapper class for `gsl_matrix_view`.

Stores a `gsl_matrix_view` and uses it to access original member data.

### 7.11.2 Constructor & Destructor Documentation

#### 7.11.2.1 `matrix_view()` [1/2]

```
gsl::matrix_view::matrix_view (  
    gsl_matrix_view gmat_view ) [inline]
```

Construct a view of a [gsl::matrix](#) through another [matrix\\_view](#).

#### 7.11.2.2 `matrix_view()` [2/2]

```
gsl::matrix_view::matrix_view (  
    const matrix & m ) [inline]
```

Construct a view of the given [gsl::matrix](#).

### 7.11.3 Member Function Documentation

#### 7.11.3.1 `get_gsl_ptr()`

```
const gsl_matrix* gsl::matrix_view::get_gsl_ptr ( ) const [inline]
```

Return a constant pointer to the underlying `gsl_matrix`.

### 7.11.3.2 operator matrix()

```
gsl::matrix_view::operator matrix ( ) const [inline]
```

"Dereferences" a [matrix\\_view](#) into independent [gsl::matrix](#) object

### 7.11.3.3 operator=() [1/2]

```
matrix\_view& gsl::matrix_view::operator= (
    const matrix & M )
```

Assignment to a matrix view from a matrix.

### 7.11.3.4 operator=() [2/2]

```
matrix\_view& gsl::matrix_view::operator= (
    matrix\_view Mv )
```

Assignment to a matrix view from another matrix view.

### 7.11.3.5 print()

```
void gsl::matrix_view::print (
    FILE * out = stdout ) const
```

Pretty-print the viewed matrix to file stream.

## 7.11.4 Member Data Documentation

### 7.11.4.1 gmat\_view

```
gsl\_matrix\_view gsl::matrix_view::gmat_view [protected]
```

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/matrix.h](#)

## 7.12 gsl::row\_view Class Reference

A subclass of [vector\\_view](#) for stride-1 vectors.

```
#include <vector.h>
```

Inheritance diagram for `gsl::row_view`:

### Public Member Functions

- [row\\_view](#) ([gsl\\_vector\\_view](#) [gvec\\_view](#))  
Construct [row\\_view](#) from existing vector view, checking that stride is 1.
- [row\\_view](#) (const [vector](#) &v)  
Construct [row\\_view](#) from vector, checking that stride is 1.
- [matrix\\_view](#) [reshape](#) (size\_t n, size\_t m)  
Return a matrix view out of the elements of the row.

### Additional Inherited Members

#### 7.12.1 Detailed Description

A subclass of [vector\\_view](#) for stride-1 vectors.

#### 7.12.2 Constructor & Destructor Documentation

##### 7.12.2.1 row\_view() [1/2]

```
gsl::row_view::row_view (
    gsl_vector_view gvec_view ) [inline]
```

Construct [row\\_view](#) from existing vector view, checking that stride is 1.

##### 7.12.2.2 row\_view() [2/2]

```
gsl::row_view::row_view (
    const vector & v ) [inline]
```

Construct [row\\_view](#) from vector, checking that stride is 1.

## 7.12.3 Member Function Documentation

### 7.12.3.1 reshape()

```
matrix_view gsl::row_view::reshape (
    size_t n,
    size_t m )
```

Return a matrix view out of the elements of the row.

The documentation for this class was generated from the following file:

- /home/jspainhour/spheroidal\_cpp/include/yawg/vector.h

## 7.13 gsl::vector Class Reference

### 7.13.1 Detailed Description

A wrapper class for `gsl_vector`.

Stores and operates on a pointer to a `gsl_vector`.

### 7.13.2 Constructor & Destructor Documentation

#### 7.13.2.1 `vector()` [1/5]

```
gsl::vector::vector ( )
```

Construct empty vector.

### 7.13.2.2 vector() [2/5]

```
gsl::vector::vector (
    size_t n ) [explicit]
```

Construct zero vector of size n.

### 7.13.2.3 vector() [3/5]

```
gsl::vector::vector (
    const gsl_vector * gvec_other )
```

Construct new [gsl::vector](#) from `gsl_vector`.

### 7.13.2.4 vector() [4/5]

```
gsl::vector::vector (
    const vector & gvec_other )
```

### 7.13.2.5 vector() [5/5]

```
gsl::vector::vector (
    vector && gvec_other )
```

### 7.13.2.6 ~vector()

```
gsl::vector::~~vector ( )
```

## 7.13.3 Member Function Documentation

### 7.13.3.1 calloc()

```
void gsl::vector::calloc (
    size_t n ) [protected]
```

Private function to (continuously) allocate memory.

#### 7.13.3.2 clear()

```
void gsl::vector::clear ( )
```

Clear the [gsl::vector](#), free underlying memory.

#### 7.13.3.3 free()

```
void gsl::vector::free ( ) [protected]
```

Private function to free allocated memory.

#### 7.13.3.4 get()

```
double gsl::vector::get (
    size_t i ) const
```

#### 7.13.3.5 get\_gsl\_ptr()

```
gsl_vector* gsl::vector::get_gsl_ptr ( ) const [inline]
```

Access the pointer to the underlying `gsl_vector`.

#### 7.13.3.6 norm()

```
double gsl::vector::norm ( ) const [inline]
```

Return the 2-norm of the vector.

#### 7.13.3.7 operator()() [1/2]

```
double& gsl::vector::operator() (
    size_t i )
```

### 7.13.3.8 operator() [2/2]

```
double gsl::vector::operator() (
    size_t i ) const
```

### 7.13.3.9 operator+=()

```
vector& gsl::vector::operator+= (
    const vector & gvec_other )
```

### 7.13.3.10 operator-=()

```
vector& gsl::vector::operator-= (
    const vector & gvec_other )
```

### 7.13.3.11 operator=() [1/2]

```
vector& gsl::vector::operator= (
    const vector & gvec_other )
```

### 7.13.3.12 operator=() [2/2]

```
vector& gsl::vector::operator= (
    vector && gvec_other )
```

### 7.13.3.13 print()

```
void gsl::vector::print (
    FILE * out = stdout ) const
```

Pretty-print the vector to file stream.

#### 7.13.3.14 `resize()`

```
void gsl::vector::resize (
    size_t n )
```

Resize the [gsl::vector](#), setting elements to zero.

#### 7.13.3.15 `set()`

```
void gsl::vector::set (
    size_t i,
    double val )
```

#### 7.13.3.16 `size()`

```
size_t gsl::vector::size ( ) const
```

#### 7.13.3.17 `subvector()`

```
vector_view gsl::vector::subvector (
    size_t offset,
    size_t size )
```

Return a view to a subvector of the vector.

#### 7.13.3.18 `view()`

```
vector_view gsl::vector::view ( )
```

Return a view to the entire vector.

### 7.13.4 Friends And Related Function Documentation

#### 7.13.4.1 `column_view`

```
friend class column_view [friend]
```

#### 7.13.4.2 cvector

```
friend class cvector [friend]
```

#### 7.13.4.3 matrix

```
friend class matrix [friend]
```

#### 7.13.4.4 operator\* [1/6]

```
cvector operator* (  
    complex a,  
    const vector & v ) [friend]
```

#### 7.13.4.5 operator\* [2/6]

```
cvector operator* (  
    const vector & v,  
    complex a ) [friend]
```

#### 7.13.4.6 operator\* [3/6]

```
vector operator* (  
    const vector & v,  
    double a ) [friend]
```

#### 7.13.4.7 operator\* [4/6]

```
vector operator* (  
    double a,  
    const vector & v ) [friend]
```

**7.13.4.8 operator\* [5/6]**

```
vector operator* (
    double a,
    vector && v ) [friend]
```

**7.13.4.9 operator\* [6/6]**

```
vector operator* (
    vector && v,
    double a ) [friend]
```

**7.13.4.10 operator+ [1/4]**

```
vector operator+ (
    const vector & v1,
    const vector & v2 ) [friend]
```

**7.13.4.11 operator+ [2/4]**

```
vector operator+ (
    const vector & v1,
    vector && v2 ) [friend]
```

**7.13.4.12 operator+ [3/4]**

```
vector operator+ (
    vector && v1,
    const vector & v2 ) [friend]
```

**7.13.4.13 operator+ [4/4]**

```
vector operator+ (
    vector && v1,
    vector && v2 ) [friend]
```

**7.13.4.14 operator- [1/4]**

```
vector operator- (
    const vector & v1,
    const vector & v2 ) [friend]
```

**7.13.4.15 operator- [2/4]**

```
vector operator- (
    const vector & v1,
    vector && v2 ) [friend]
```

**7.13.4.16 operator- [3/4]**

```
vector operator- (
    vector && v1,
    const vector & v2 ) [friend]
```

**7.13.4.17 operator- [4/4]**

```
vector operator- (
    vector && v1,
    vector && v2 ) [friend]
```

**7.13.4.18 operator==**

```
bool operator== (
    const vector & v1,
    const vector & v2 ) [friend]
```

**7.13.4.19 row\_view**

```
friend class row_view [friend]
```

**7.13.4.20 vector\_view**

```
friend class vector_view [friend]
```

## 7.13.5 Member Data Documentation

### 7.13.5.1 gvec

`gsl_vector* gsl::vector::gvec` [protected]

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/vector.h](#)

## 7.14 gsl::vector\_view Class Reference

A wrapper class for `gsl_vector_view`.

```
#include <vector.h>
```

Inheritance diagram for `gsl::vector_view`:

### Public Member Functions

- [operator vector](#) () const  
*"Dereferences" a [vector\\_view](#) into independent [gsl::vector](#) object*
- [vector\\_view](#) ([gsl\\_vector\\_view](#) [gvec\\_view](#))  
*Construct a view of a [gsl::vector](#) through another [vector\\_view](#).*
- [vector\\_view](#) (const [vector](#) &*v*)  
*Construct a view of the given [gsl::vector](#).*
- [vector\\_view](#) & [operator=](#) (const [vector](#) &*v*)  
*Assignment to a vector view from a vector.*
- [vector\\_view](#) & [operator=](#) ([vector\\_view](#) *v*)  
*Assignment to a vector view from a vector view.*
- void [print](#) (FILE \**out=stdout*) const  
*Pretty-print the viewed vector to file stream.*
- const `gsl_vector *` [get\\_gsl\\_ptr](#) () const  
*Return a constant pointer to the underlying [gsl\\_vector](#).*

### Protected Attributes

- `gsl_vector_view` [gvec\\_view](#)

### 7.14.1 Detailed Description

A wrapper class for `gsl_vector_view`.

Stores a `gsl_vector_view` and uses it to access original member data.

### 7.14.2 Constructor & Destructor Documentation

#### 7.14.2.1 vector\_view() [1/2]

```
gsl::vector_view::vector_view (  
    gsl_vector_view gvec_view ) [inline]
```

Construct a view of a [gsl::vector](#) through another [vector\\_view](#).

#### 7.14.2.2 vector\_view() [2/2]

```
gsl::vector_view::vector_view (  
    const vector & v ) [inline]
```

Construct a view of the given [gsl::vector](#).

### 7.14.3 Member Function Documentation

#### 7.14.3.1 get\_gsl\_ptr()

```
const gsl_vector* gsl::vector_view::get_gsl_ptr ( ) const [inline]
```

Return a constant pointer to the underlying `gsl_vector`.

#### 7.14.3.2 operator vector()

```
gsl::vector_view::operator vector ( ) const [inline]
```

"Dereferences" a [vector\\_view](#) into independent [gsl::vector](#) object

#### 7.14.3.3 operator=() [1/2]

```
vector_view& gsl::vector_view::operator= (
    const vector & v )
```

Assignment to a vector view from a vector.

#### 7.14.3.4 operator=() [2/2]

```
vector_view& gsl::vector_view::operator= (
    vector_view v )
```

Assignment to a vector view from a vector view.

#### 7.14.3.5 print()

```
void gsl::vector_view::print (
    FILE * out = stdout ) const
```

Pretty-print the viewed vector to file stream.

### 7.14.4 Member Data Documentation

#### 7.14.4.1 gvec\_view

```
gsl_vector_view gsl::vector_view::gvec_view [protected]
```

The documentation for this class was generated from the following file:

- [/home/jspainhour/spheroidal\\_cpp/include/yawg/vector.h](/home/jspainhour/spheroidal_cpp/include/yawg/vector.h)

## Chapter 8

# File Documentation

### 8.1 grid\_functions.h File Reference

```
#include <yawg/matrix.h>
```

#### Functions

- int [spharm\\_grid\\_size\\_ord](#) (int p, int &nu, int &nv)  
*Computes grid size of spheroidal harmonics grid given the order.*
- int [spharm\\_grid\\_size\\_tot](#) (int ntot, int &nu, int &nv)  
*Computes grid size of spheroidal harmonics grid given the total number of points.*
- void [gl\\_grid](#) (size\_t p, [gsl::matrix](#) &U, [gsl::matrix](#) &V)  
*Populates the matrices  $U$  and  $V$  with a spheroidal harmonics grid of order  $p$ .*

#### 8.1.1 Function Documentation

##### 8.1.1.1 gl\_grid()

```
void gl_grid (  
    size_t p,  
    gsl::matrix & U,  
    gsl::matrix & V )
```

Populates the matrices  $U$  and  $V$  with a spheroidal harmonics grid of order  $p$ .

### 8.1.1.2 spharm\_grid\_size\_ord()

```
int spharm_grid_size_ord (
    int p,
    int & nu,
    int & nv )
```

Computes grid size of spheroidal harmonics grid given the order.

### 8.1.1.3 spharm\_grid\_size\_tot()

```
int spharm_grid_size_tot (
    int ntot,
    int & nu,
    int & nv )
```

Computes grid size of spheroidal harmonics grid given the total number of points.

## 8.2 legendre\_otc.h File Reference

```
#include <yawg/vector.h>
#include <yawg/matrix.h>
```

### Functions

- [gsl::vector cont\\_frac](#) (int n, int m, [gsl::vector](#) u)
- int [geti](#) (int n, int m)
- void [legendre\\_otc](#) (int p, [gsl::vector](#) u, [gsl::matrix](#) &P)
- void [legendre\\_otc](#) (int p, [gsl::vector](#) u, [gsl::matrix](#) &P, [gsl::matrix](#) &Q)
- void [Dlegendre\\_otc](#) (int p, [gsl::vector](#) u, [gsl::matrix](#) &P, [gsl::matrix](#) &dP)
- void [Dlegendre\\_otc](#) (int p, [gsl::vector](#) u, [gsl::matrix](#) &P, [gsl::matrix](#) &Q, [gsl::matrix](#) &dP, [gsl::matrix](#) &dQ)

### 8.2.1 Function Documentation

#### 8.2.1.1 cont\_frac()

```
gsl::vector cont_frac (
    int n,
    int m,
    gsl::vector u )
```

### 8.2.1.2 Dlegendre\_otc() [1/2]

```
void Dlegendre_otc (
    int p,
    gsl::vector u,
    gsl::matrix & P,
    gsl::matrix & dP )
```

### 8.2.1.3 Dlegendre\_otc() [2/2]

```
void Dlegendre_otc (
    int p,
    gsl::vector u,
    gsl::matrix & P,
    gsl::matrix & Q,
    gsl::matrix & dP,
    gsl::matrix & dQ )
```

### 8.2.1.4 geti()

```
int geti (
    int n,
    int m )
```

### 8.2.1.5 legendre\_otc() [1/2]

```
void legendre_otc (
    int p,
    gsl::vector u,
    gsl::matrix & P )
```

### 8.2.1.6 legendre\_otc() [2/2]

```
void legendre_otc (
    int p,
    gsl::vector u,
    gsl::matrix & P,
    gsl::matrix & Q )
```

## 8.3 spheroidal\_analysis.h File Reference

```
#include <vector>
#include <gsl_wrapper/core.h>
```

### Functions

- [gsl::vector spheroidal\\_analysis \(gsl::vector f\)](#)

### 8.3.1 Function Documentation

#### 8.3.1.1 spheroidal\_analysis()

```
gsl::vector spheroidal_analysis (
    gsl::vector f )
```

## 8.15.1 Macro Definition Documentation

### 8.15.1.1 CATCH\_CONFIG\_MAIN

```
#define CATCH_CONFIG_MAIN
```

## 8.15.2 Function Documentation

### 8.15.2.1 TEST\_CASE() [1/20]

```
TEST_CASE (
    "gsl::cmatrix assignment operators" ,
    "" [gsl::cmatrix] )
```

### 8.15.2.2 TEST\_CASE() [2/20]

```
TEST_CASE (
    "gsl::cmatrix constructors" ,
    "" [gsl::cmatrix] )
```

### 8.15.2.3 TEST\_CASE() [3/20]

```
TEST_CASE (
    "gsl::cmatrix element access" ,
    "" [gsl::cmatrix] )
```

### 8.15.2.4 TEST\_CASE() [4/20]

```
TEST_CASE (
    "gsl::cmatrix resize" ,
    "" [gsl::cmatrix] )
```

#### 8.15.2.5 TEST\_CASE() [5/20]

```
TEST_CASE (
    "gsl::complex constructors" ,
    "" [gsl::complex] )
```

#### 8.15.2.6 TEST\_CASE() [6/20]

```
TEST_CASE (
    "gsl::cvector assignment operators" ,
    "" [gsl::cvector] )
```

#### 8.15.2.7 TEST\_CASE() [7/20]

```
TEST_CASE (
    "gsl::cvector constructors" ,
    "" [gsl::cvector] )
```

#### 8.15.2.8 TEST\_CASE() [8/20]

```
TEST_CASE (
    "gsl::cvector element access" ,
    "" [gsl::cvector] )
```

#### 8.15.2.9 TEST\_CASE() [9/20]

```
TEST_CASE (
    "gsl::cvector resize" ,
    "" [gsl::cvector] )
```

#### 8.15.2.10 TEST\_CASE() [10/20]

```
TEST_CASE (
    "gsl::matrix -> gsl::cmatrix conversion" ,
    "" [gsl::matrix][gsl::cmatrix] )
```

**8.15.2.11 TEST\_CASE()** [11/20]

```
TEST_CASE (
    "gsl::matrix assignment" ,
    "" [gsl::matrix] )
```

**8.15.2.12 TEST\_CASE()** [12/20]

```
TEST_CASE (
    "gsl::matrix constructors" ,
    "" [gsl::matrix] )
```

**8.15.2.13 TEST\_CASE()** [13/20]

```
TEST_CASE (
    "gsl::matrix element access" ,
    "" [gsl::matrix] )
```

**8.15.2.14 TEST\_CASE()** [14/20]

```
TEST_CASE (
    "gsl::matrix resize" ,
    "" [gsl::matrix] )
```

**8.15.2.15 TEST\_CASE()** [15/20]

```
TEST_CASE (
    "gsl::vector -> gsl::cvector conversion" ,
    "" [gsl::vector][gsl::cvector] )
```

**8.15.2.16 TEST\_CASE()** [16/20]

```
TEST_CASE (
    "gsl::vector assignment operators" ,
    "" [gsl::vector] )
```

**8.15.2.17 TEST\_CASE()** [17/20]

```
TEST_CASE (
    "gsl::vector constructors" ,

*Use Catch2 to test addition of gsl::vectors and gsl::cvectors.*
- `TEST_CASE` ("gsl::vector and gsl::cvector scalar multiplication", "[gsl::vector][gsl::cvector]")  
*Use Catch2 to test scalar multiplication of gsl::vectors and gsl::cvectors.*

## 8.16.1 Macro Definition Documentation

### 8.16.1.1 CATCH\_CONFIG\_MAIN

```
#define CATCH_CONFIG_MAIN
```

## 8.16.2 Function Documentation

### 8.16.2.1 TEST\_CASE() [1/6]

```
TEST_CASE (
    "gsl::complex assignment operators" ,
    " [gsl::complex] )
```

### 8.16.2.2 TEST\_CASE() [2/6]

```
TEST_CASE (
    "gsl::complex methods" ,
    " [gsl::complex] )
```

### 8.16.2.3 TEST\_CASE() [3/6]

```
TEST_CASE (
    "gsl::complex operators" ,
    " [gsl::complex] )
```

#### 8.16.2.4 TEST\_CASE() [4/6]

```
TEST_CASE (
    "gsl::vector addition" ,
    "" [gsl::vector] )
```

Use Catch2 to test addition of `gsl::vectors`.

#### 8.16.2.5 TEST\_CASE() [5/6]

```
TEST_CASE (
    "gsl::vector and gsl::cvector addition" ,
    "" [gsl::vector][gsl::cvector] )
```

Use Catch2 to test addition of `gsl::vectors` and `gsl::cvector`s.

#### 8.16.2.6 TEST\_CASE() [6/6]

```
TEST_CASE (
    "gsl::vector and gsl::cvector scalar multiplication" ,
    "" [gsl::vector][gsl::cvector] )
```

Use Catch2 to test scalar multiplication of `gsl::vectors` and `gsl::cvector`s.
